## REPORT ON COLLEGE STUDENT'S VISIT TO SBT

On Jan. 11' 2024 a group of students from Rewa Gurjar College, Sanawad had the opportunity to visit our School of Biotechnology, DAVV. There were around 100 students accompanied with 8 faculty members of the college. The purpose of the visit was to provide students with insights into the department's facilities, ongoing research, and educational programs.

The visit commenced with a guided tour of our state-of-the-art laboratories, research facilities, and classrooms. Students had the chance to observe equipment used in various experiments like Centrifuge, Spectrophotometer, Incubator, UV transilluminator, PCR, Autoclave and gain a firsthand understanding of the technology, animal handling, Cancer cell line and infrastructure available within the department.

Following the tour, students engaged in interactive sessions with our HOD Dr. Anjana Jajoo and Associate Professor Dr. Hamendra Singh Parmar, faculty members, research scholars and M.sc students. This provided a platform for students to ask questions, discuss ongoing projects, and explore potential areas of interest within the field of study. The discussions aimed to foster a deeper understanding of the subject matter and inspire academic curiosity.

A highlight of the visit was a showcase of ongoing research projects undertaken by both faculty and graduate students. This allowed students to witness the practical applications of theoretical knowledge and appreciate the diverse range of research areas within the department.

To provide clarity on academic offerings, the visit included a presentation outlining the M.Sc. Biotechnology program, admission criteria, and potential career paths for graduates. The presentation also highlighted collaborations, internships, and opportunities for students to actively participate in research initiatives.

The visit concluded with a feedback session, where students shared their impressions and asked further questions. Overall, the feedback was positive, with many students expressing enthusiasm for the field and appreciation for the department's commitment to academic excellence.

We hope that this visit has not only provided valuable insights but has also inspired the next generation of biotechnologists. The SBT remains committed to fostering a conducive learning environment for aspiring scientists.
